

Lucky Stars Scatter Reactors™

How to Play

Introduction

Lucky Stars Scatter Reactors™ is an exciting 6x6 symbol grid game featuring the revolutionary Scatter Reactors™ mechanic. With Scatter Reactors™, you no longer need to connect symbols to make a winning payout. If 9, or more, of the same symbol appear anywhere on the grid after a symbol drop, you win a prize! During any game, our friendly Witch can spawn random Wilds to help create even bigger wins. If you land 3 or more Bonus Star symbols you win at least 10 Free Games where all wilds are Multiplying Wilds!

How to Win

The initial symbol drop fills the grid with symbols after which several things can happen.

If you have nine, or more, identical symbols scattered on the grid they will form a winning Scatter Reactors™ combination and explode. It is possible to get multiple Scatter Reactors™ combinations in the same game with each win adding to the overall payout total. Payouts increase depending on the number of matching symbols in each Scatter Reactors™ combination, the value of the symbol itself and your Stake amount.

Each time you have a winning combination, those symbols will explode, and the symbols above will fall into the vacant spaces. A subsequent drop of new symbols will fall to fill the grid giving you a chance to obtain more winning combination. This sequence will continue to repeat until there are no more winning combinations.

Paytable

Payout values are based on the type and number of symbols you match in each winning combination. Payouts are calculated as a multiplier of your game stake. Please look in-game for the full paytable.

Wild Symbols

The star symbol is wild and can replace every symbol, to create a winning combination, but cannot substitute for a Bonus symbol. It is possible for Wild symbols to substitute for more than one symbol to form multiple winning combinations on a single drop. For example, if you have 8 cherry symbols, 8 grape symbols and one wild symbol on the grid, the wild symbol will be added to both combinations to form 2 separate 9-symbol winning combination. After any initial base game drop or a subsequent drop (but not during Free Bonus Games), the friendly Witch may randomly populate the grid with 1, or more, wild symbols.

Free Games Bonus Round

Three or more Bonus symbols triggers the Free Games Bonus round. Three Bonus symbols awards 10 Free Games with each additional Bonus symbol awarding an additional 2 Free Games.

Wild symbols in Free Games drops have a win multiplier value ranging from 2x to 100x. Win multipliers do not multiply the winning combination right away; each one adds its value to the multiplier meter box. Each Free Game win is calculated by multiplying the total win multiplier in the meter box by the sum of all winning combinations during that Free Game round.

The win multiplier in the meter box resets to zero at the start of each new Free Game round. If there are no Wild symbols that appear during a Free Game, the win multiplier in the meter box will be considered as 1x.

During Free Games, each Bonus symbol appearing on the grid will add 2 extra Free Games to the counter.

The charming Witch can also use her magic during a Free Games round to randomly transform one or two symbols on the grid into Wild symbol with win multiplier.

Terms and Return to Player

In the event of a real play game being interrupted, (i.e. not completing due to connectivity issues or accidentally closing the browser etc.), depending on the previous state of the game, it will either resume from the same point when it crashed or display the outcome of the game that was being played. Any winnings will be correctly credited to your account and will be exact according to the result prior to the game being interrupted.

In the event of a non-responsive game, or similar problem during a bonus round, the game will resume, completing the bonus round and displaying the result, the next time you launch the game.

The odds of getting a particular outcome are always the same at the start of every game. The odds do not vary based on prior outcomes, bet size, balance size, time of day, day of the week, etc. For example, if the top award is won on a given play of the game, the chances of winning the top award on the next play are exactly the same. Likewise, prior losses do not change future odds.

The theoretical average return to player (RTP) is 95.00%. This RTP represents the long-term expected payback of the game. Malfunction voids all pays and plays.
